## Create Node-RED Service

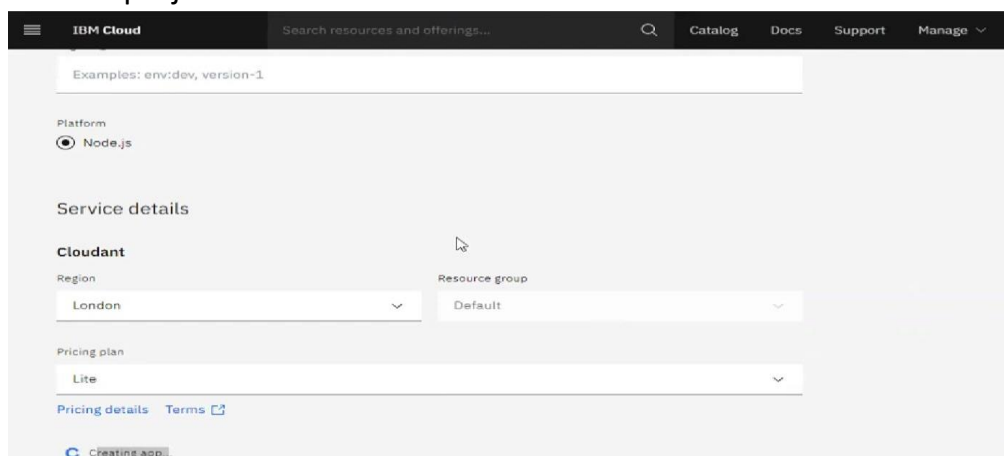

Aim: To create a web application create a Node-RED service.

Steps followed:

- Navigated to the App creation page

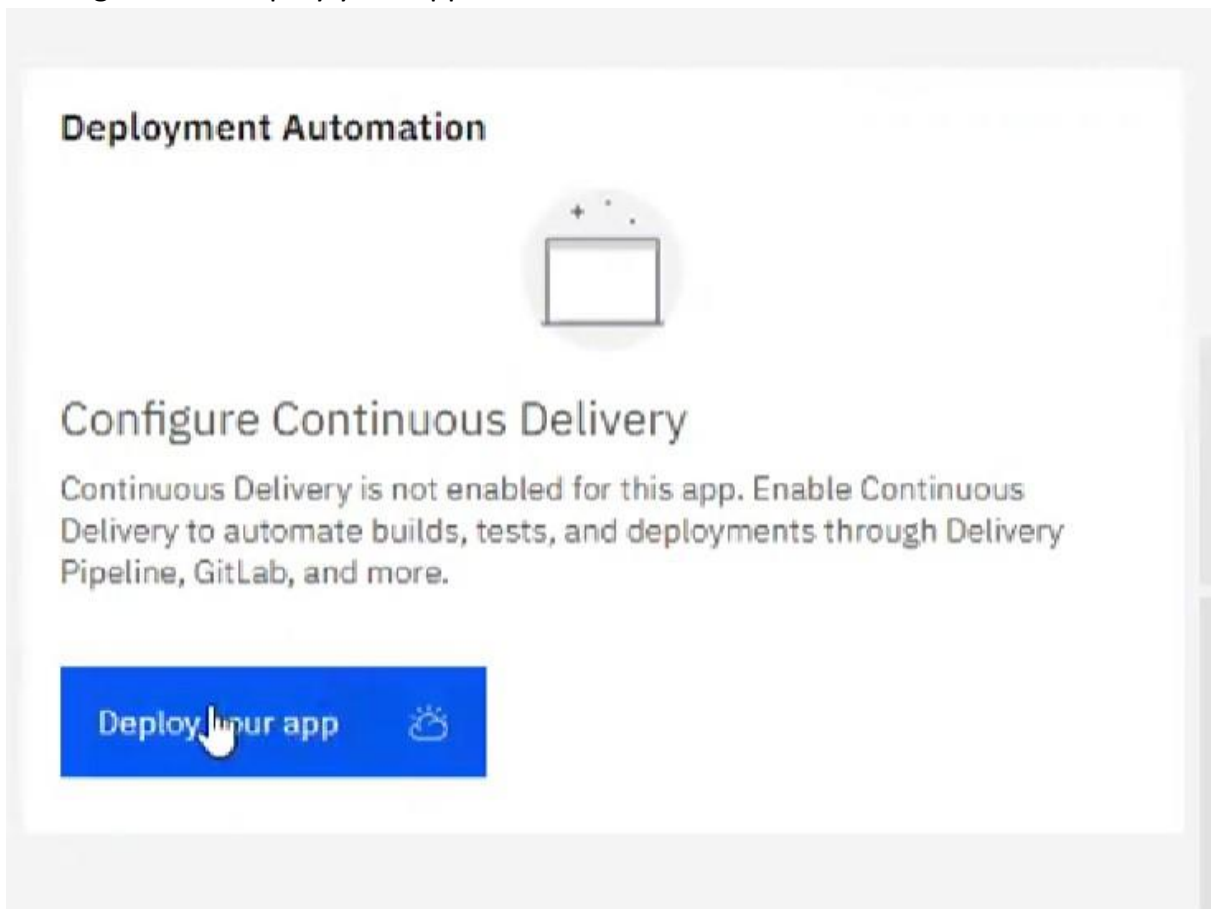

- Entered project details and clicked on create

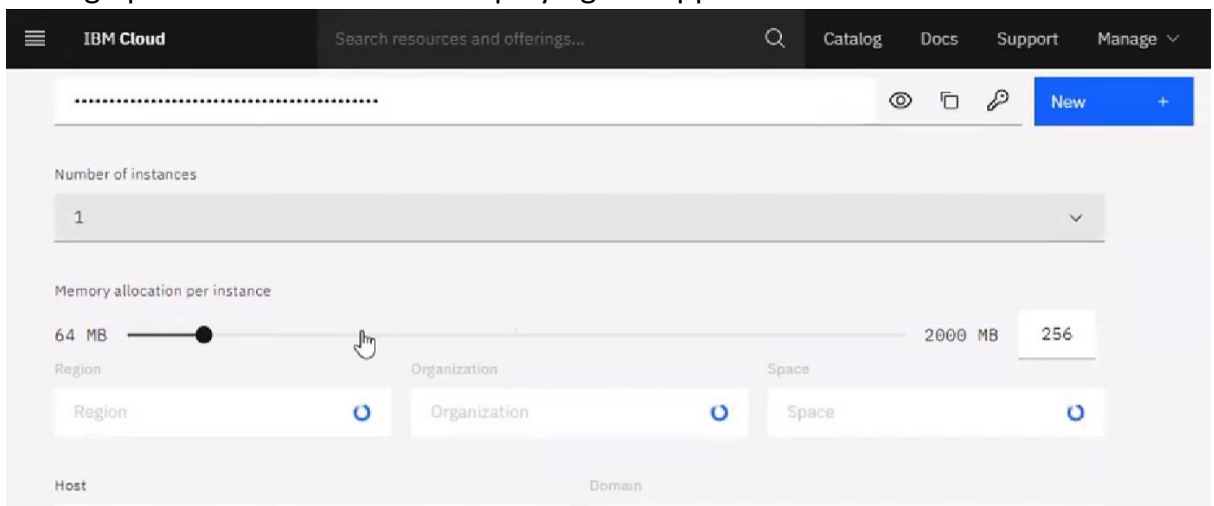

- 

Clicking on the “Deploy your App” Button

- Setting up the environment and deploying the app

Successfully deployed the app

- 

## Delivery Pipelines

Name	<a href="#">ci-pipeline</a> 
Status	 <a href="#">Success</a> 
Last input	Last commit by IBM Cloud DevOps Services (7 minutes ago) <a href="#">Clone from zip</a> 

- Welcomed by the instance editor

Welcome to your new Node-RED instance on IBM Cloud

We know you're eager to start wiring up your flows, but first there are a couple of tasks you should do:

- Secure your Node-RED editor
- Learn how to install additional nodes

- Setting up credentials

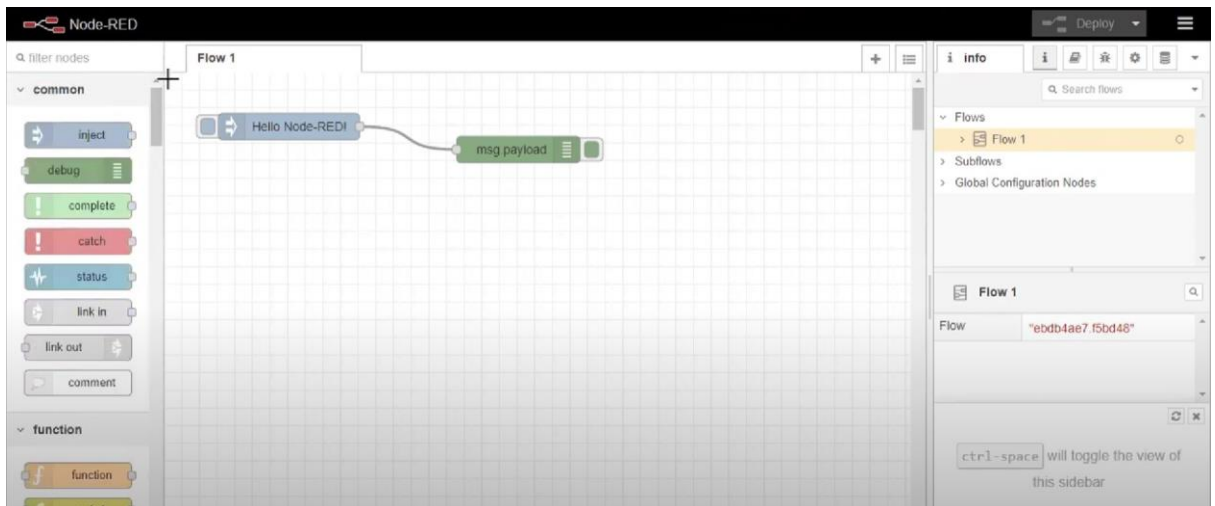

☐ Secure your editor so only authorised users can access it

☒ *Not recommended:* Allow anyone to access the editor and make changes  

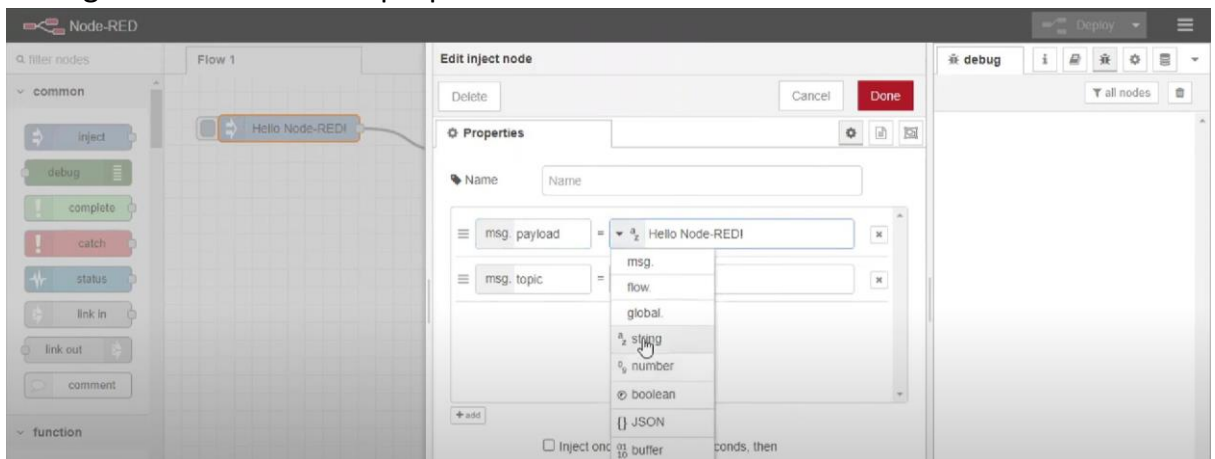

Your editor will not be secured. Anyone with the URL will be able to access your flows, data and bound services.

☒ Tick this box to confirm you want your editor to be insecure

Dragged and dropped components into the editor

- Editing some values of the properties

- Successfully deployed the app

Result: Successfully created a NodeRED service on IBM Cloud
